

UAW Health and Safety Department Collection

Records, 1946-2003

67.5 linear feet

Accession #1576

OCLC #

The records of the UAW Health and Safety Department were placed in the Archives of Labor and Urban Affairs between 1994 and 2005 by the UAW and opened for research in July of 2005. Records from the late 1940's and early 1950's processed into the UAW Social Security Department: Industrial Health and Safety Division Collection have been incorporated into the new collection.

The UAW recognized the importance of occupational health and safety early in the union's history, establishing the Health and Safety Division in the Social Security Department in February of 1948. A 1949 Administrative Letter stipulated that contract provisions developed by the Health and Safety Division required management to permit the division to make examinations and investigations when requested by plant health and safety committees. In the 1973 contract, the first one to specify in detail measures designed to protect the health and safety of UAW members, professional staff members were designated to sit on the union-company national health and safety committees which plan and supervise the development of company-wide programs.

By the 1980's, however, concerns over health and safety hazards in the workplace had grown to the point where the International Executive Board felt the need to establish an independent department. When it did so in December of 1981, the staff of the UAW Health and Safety Department was recognized as the largest group of its type employed by a North American labor union. The department's first director, Dr. Franklin Mirer, a toxicologist and industrial hygienist and assistant director of the Social Security Department, had been with the UAW since 1975.

UAW Health and Safety Department staff work in coordination with international representatives in national departments and regions and hundreds of full-time local union health and safety representatives to achieve effective health and safety collective bargaining language, to pressure legislators and government agencies to set and enforce safe standards for hazardous materials and conditions in the workplace and to institute programs for in-plant health and safety education.

The records of the UAW Health and Safety Department include correspondence, departmental publications and radio script dramatizations of incidents from department files, meeting minutes, government agency, union and company plant inspection and accident investigation reports, OSHA and Michigan Department of Labor plant citations, departmental and government research studies of workplace mortality and health and safety hazards as well as materials related to litigation and OSHA hearings that document the activities of the department and worker health and safety issues generally.

Important subjects in the collection:

Automobile industry and trade--Health aspects
Automobile industry and trade--Safety measures
Automobile industry workers--Health and hygiene--United States
Carcinogens--Safety measures
Chloroform (Freon)--Toxicology
Factories--United States--Safety measures
Formaldehyde--Health aspects
Foundry workers--United States--Health and hygiene
Glass fibers--Health aspects
Hazardous substances--Law and legislation--United States
Hazardous substances--Safety measures--United States
Human engineering (ergonomics)
Industrial accidents--United States
Industrial hygiene--United States
Industrial safety--Law and legislation--United States
Industrial safety--Standards--United States
Lead--Health aspects
Metal-working lubricants--Health aspects
National Institute for Occupational Safety and Health
Occupational diseases--Mortality
Occupational mortality--United States
Reproductive health
Safety education, Industrial
Silica--Health aspects
United States. Occupational Safety and Health Administration
United States. Occupational Safety and Health Administration--Confined
space entry standard
United States. Occupational Safety and Health Administration-Lockout/
/tagout standard

Important correspondents in the collection:

Contents

67 storage boxes
1 manuscript box

Series I, Franklin Mirer Correspondence, 1976-1986, Boxes 1-8:

Files are arranged chronologically.

Series II, Office Operations Files, 1947-2003, Boxes 9-10:

Staff meeting minutes, departmental reports and publications and scripts for "To Your Industrial Health" and "Danger—Men at Work," radio programs produced by the department in the late 1940's and early 1950's. Files are arranged alphabetically.

Series III, Subject Files, 1960's-1991, Boxes 10-29:

Correspondence, reports, meeting minutes, legal documents and research studies related to the department's efforts to identify and control hazardous substances and unsafe working conditions in UAW-represented facilities and to the union's relations with government agencies responsible for regulating workplace health and safety. Also included are files documenting the work of the joint union-company health and safety committees and the department's involvement in contract negotiations. Files are arranged alphabetically.

Series IV, Local Union Files, 1946-1994, Boxes 29-68:

Correspondence, material safety data sheets, plant inspection, epidemiological, accident and fatality reports, NIOSH Health Hazard Determination Evaluations and other industrial hygiene studies, federal and state citations for health and safety regulation violations and other material documenting health and safety conditions in the automobile, agricultural implement, aerospace and related industries. Files are arranged numerically by local union number.
